

SMARTPAVE-SPA6

Introducing SPA6, the revolutionary refurbishment system that's taking the industry by storm. This flooring solution is specifically designed for flat roofs, balconies, roof decks, roof gardens, and even roof pools. With SPA6, you can transform any sealed, old floor into a long lasting and elegant floor, saving both time and money on labor costs.

Crafted from elastic basis materials that are uniquely suited to the Canadian climate and its fluctuations, SPA6 is a remarkably tough and resilient material that can withstand even the harshest environments, including extreme temperatures. In addition to its frost-proof and anti-crack features, SPA6 applied on rooftop restaurant patios also provides sound and shock absorbing properties. This innovative flooring solution not only offers exceptional incident-free and impact-resistant characteristics but also acts as a long-lasting protective layer for your roof assemblies.
